

Every Drop Counts

When it comes to saving water, everybody can make a difference!

Did you know that by cutting just three minutes off your shower you can save nine buckets of water?

That's enough water to fill most bath tubs!

Here are some helpful little tips to help you make a difference:

- 💧 To change the water temperature turn one tap down instead of turning the other up
- 💧 Collect the water that comes out while you wait for the water to heat up and reuse it in the garden or for the pets
- 💧 Put the plug in while you wash your hands instead of holding them under running water
- 💧 Rinse your dishes in a plugged sink instead of under running water
- 💧 Keep a container of drinking water in the fridge instead of wasting water waiting for it to cool down

- 💧 Thaw frozen food in the fridge or microwave instead of under water
- 💧 Use the half flush on the toilet whenever possible
- 💧 Don't leave water running while cleaning your teeth

Think of many more ways to save water and make a difference in your home!

All the water in the world has been there since the Earth was created. So if you pollute the water it's going to come back.

All the rubbish you throw on the ground is going to be washed in the waterways

Remember the 3 R's

- 💧 Reduce your water usage
- 💧 Reuse waste water whenever possible
- 💧 Remember that whatever goes down the drains eventually ends up in our rivers, dams and beaches
